Caramel Malt 60L

**TYPICAL ANALYSIS**
- Mealy / Half / Glassy .................................. 0% / 5% / 95%
- Plump .................................................................. 80%
- Thru ...................................................................... 5%
- Moisture .................................................................. 5.0%
- Extract FG, Dry Basis ........................................... 77.0%
- Color ................................................................. 60° Lovibond

**ITEM NUMBER**
- 5411 ...................................................... Whole Kernel, 50-pound bag
- 5664 ...................................................... Preground, 50-pound bag

**CERTIFICATION**
- Kosher: UMK Pareve

**STORAGE AND SHELF LIFE**
Store in a temperate, low humidity, pest free environment at temperatures of <90 ºF. Improperly stored malts are prone to loss of freshness and flavor. Whole Kernel Diastatic and Preground Malts best when used within 6 months from date of manufacture. Whole Kernel Roasted Malts may begin experiencing a slight flavor loss after 18 months.

**AVERAGE SENSORY PROFILE**

*The average sensory profile shows the intensity of flavors and aromas perceived in a Congress Mash wort by the Briess Malt Sensory Panel. Usage will influence how these flavors are perceived in the final beer.*
Caramel Malt 60L (Continued)

FLAVOR & COLOR CONTRIBUTIONS

- Malt Style: Caramel Malt (Roasted)
- Flavor: Sweet, Pronounced Caramel
- Color: Contributes deep golden to red hues

CHARACTERISTICS / APPLICATIONS

- Briess Caramel Malts are roaster produced. Roasters, rather than kilns, make the fullest flavored and best performing Caramel Malts. Briess roasters are efficient drum roasters that have been custom designed and engineered to roast malt and barley. These customized drum roasters allow for the application of significantly higher temperatures to green malt. This is a must for the true crystallization of sugars and development of unique flavors, colors and physical properties only associated with the glassy, crystallized sugars of Caramel Malt.
- Caramel Malts are characterized by a glassy endosperm with varying degrees of sweet flavor ranging from light caramel to toffee to burnt sugar. Typical color range of Caramel Malts is 10º to 120º Lovibond.
- A distinguishing characteristic of Caramel Malts is their ability to improve foam development and stability and enhance viscosity due to non-fermentable structures they contribute to beer.
- Produced in the U.S.A. from AMBA/BMBRI recommended 2-Row malting varieties.

SUGGESTED USAGE LEVELS

- 1-3% For balance in Pilsners
- 5-10% California Common Beer, Vienna, Marzen and Oktoberfest
- 5-15% Doppelbocks, Dark Lagers and Barley Wine
- 5-15% Certain styles of Brown Ales, Scotch Ales, Stouts and Porters

1The parameters of a Congress Mash include malt grind, liquor-to-grist-ratio, temperature ramps and holds, and filtration. The process uses 50 grams of malt and 400 milliliters of water. Conversion is usually complete within 2.5 hours with a final conversion step of 70ºC (158ºF). This mash determines extract, viscosity, color, beta glucans, turbidity and soluble protein.
