Brewers Triticale Flakes

TYPICAL ANALYSIS
Moisture ................................................................. 7.0%
Extract FG Dry Basis .................................................. 71.0%
Protein Dry Basis ......................................................... 13.5%
Diastatic Power °Lintner .............................................. negligible
Conversion Time ......................................................... Less than 10 minutes
Color ................................................................. 2.5°Lovibond
(Degree Lovibond, Series, 52, ½” Cell)

ITEM NUMBER
7596 .................................................. 50-pound multi-wall paper bags

KOSHER CERTIFICATION
UMK Pareve

STORAGE AND SHELF LIFE
Best if used within 6 months from date of manufacture.
Store in a dry area at temperatures of <90 °F.
Handle with care to avoid breaking the flakes.

CHARACTERISTICS / APPLICATIONS

- Brewers Triticale is a hybrid of wheat and rye. It combines the yield potential and grain quality of wheat with the disease and environmental tolerance of rye. Triticale carries the flavor components of both spice rye and nutty wheat flavor.
- Brewers Triticale Flakes have been produced specifically for brewing, developing characteristics necessary for easy and efficient use in a brewhouse. The process of gelatinizing makes the starches readily soluble and digestible by the naturally occurring enzymes in barley malt. This allows the flakes to be incorporated directly into the mash with other grains.
- Because flakes have a large surface area and are pre-cooked, they hydrate and disintegrate quickly. Filtration time will be normal.
- There is no need to mill Triticale Flakes. However, they can be put through the mill if that is the easiest means of adding them to the mash.
- Use up to 30% as a cereal adjunct in the total grist to create Rye Beers, Belgian Wit Beer, Amber Ales and Multi-Grain Beers.
- Start at 5-10% and increase in increments of 5% because of the concentrated flavor.
